

Quick Release Restraint

Adaptable and sturdy

The Quick Release Restraint is a flexible construction for temporarily securing life rafts and other heavy items in aircraft and helicopters.

It is light, flexible and easy to operate. Adjustable attachment straps with hooks and single stud tie down fittings secure the raft to standard floor railings. By using the hooks alone, it can be secured to any suitable hard points and even in seats. An integrated Tritium light in the handle facilitates locating the strapped down unit in darkness.

Pulling the red handle firmly in any direction will disconnect the straps and enable the operator to throw it out in a single action by holding on to the handle which remains attached to the raft after release.

Safely securing your life raft has never been easier.

Features

- Handle assembly with triple 3-ring system
- Integrated Tritium light for increased visibility in darkness
- Attachments straps with single stud tie down fittings

Technical Data

Weight:	1-2 kg
Length:	150 mm
Width:	150 mm
Thickness:	50 mm

Mounts in standard floor fittings

Easy to operate

Handle remains attached to raft after release
